PROFILE

UK-based Applied AI Developer and MSc Data Science & AI student at Aston University, with 2+ years of professional experience building AI-integrated, full-stack applications. Skilled in Python, SQL, JavaScript and TypeScript, with practical expertise in LLM integration, agentic workflow design, NLP, RAG and data pipeline development. Experienced in applying AI to automate operational processes, process complex datasets and deliver intelligent tooling in production environments.

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, TypeScript, Dart, Flutter, React

Backend & Data: SQL, PostgreSQL, Supabase, Firebase, REST APIs, Data Pipelines

AI & Machine Learning: LLM Integration, Agentic Workflows, NLP, RAG, Generative AI, Scikit-learn, Pandas, NumPy

Tools & Practices: Git/GitHub, AI-assisted Dev (Claude, Copilot), Clean Architecture, MVVM, Agile

EXPERIENCE

Full-Stack AI Developer (Freelance) – Circlesave, USA

May 2025 – Present (Remote)

- Built a community-based lending platform using React, Supabase and PostgreSQL, designing SQL schemas for secure financial data management and transaction processing.
- Designed and implemented agentic AI controls for admin and user workflows, automating complex operational decisions and significantly reducing manual intervention.
- Developed AI-driven data pipelines to process structured transaction data, surfacing actionable insights for operational decision-making.
- Utilised AI-assisted development tooling (Claude) throughout the build to accelerate delivery, maintain code quality and produce clear technical documentation.

React Developer — AI Tools Platform (Freelance) – Aplypse

Aug 2024 – Dec 2024 (Remote)

- Developed a production AI tools and news discovery platform using React, integrating multiple LLM APIs to automate content ingestion, classification and delivery workflows.
- Built document processing pipelines that extracted and structured content from unstructured sources, directly improving content relevance and user engagement.
- Applied prompt engineering and agent-style orchestration to automate editorial curation, demonstrating practical LLM tooling experience in a live environment.

Junior Software Developer (Full-time) – ARK Power Solutions Pvt. Ltd., India

Aug 2022 – May 2024 (Onsite)

- Developed and maintained cross-platform applications for Android, iOS and Windows using Flutter, building scalable features from a single shared codebase.
- Reduced cross-platform delivery time by approximately 30% through clean architecture practices and shared component design.
- Supported data migration activities and improved UI responsiveness across production systems serving live customers.

EDUCATION

MSc Data Science and Artificial Intelligence (AI)

Aston University, UK | 2026 – 2027 (Expected)

- Key areas: machine learning, NLP, large language models, agentic AI systems, knowledge representation and data pipeline architecture.
- Actively exploring RAG architectures, vector-enabled retrieval and autonomous agent design — applied directly to freelance projects.

Bachelor of Computer Applications (BCA)

Bangalore University, India | 2019 – 2022

AVAILABILITY

Available for Applied AI Developer internships, part-time or graduate roles in the United Kingdom. Currently on a Student Visa and eligible to work up to 20 hours per week during term time. Open to hybrid or on-site arrangements across the UK.
